

Follow these steps the FIRST time you participate in any of the online sessions:

1. Make sure your computer satisfies the minimum system requirements, listed on the [Elluminate Live! website](#).
2. Ensure you have a microphone, speakers, or headset to take full advantage of the audio capabilities during the session (depending on the requirements of the session in which you are participating).
3. Go to www.illuminate.com/support/ and follow the information in the “First Time Users” section. The program will check to see if you have Java Web Start installed. If you do not, follow the online instructions for downloading it.

The installation of Java Web Start is a one-time process that you will not need to repeat. The download can take up to 40 minutes on a 28.8K modem (less if your Internet connection speed is faster). Please be sure to allow sufficient time to complete the download and installation before your first session.

4. In the “First Time Users” section, click on “join the Configuration Room.” This will test your connection and allow you to configure your audio.
