

Professional Learning Services to Help Online and Blended Learning Programs Thrive

Why Professional Learning Is Important

Our priority is to make sure your online or blended learning program starts off right.

For a program to succeed, the educators implementing it must possess a critical knowledge of the best ways to use the latest educational technology tools and a solid understanding of the pedagogies driving them. With FuelEd’s professional learning program, instructors, administrators, and mentors can meet each student’s needs in new and exciting ways.

FuelEd offers a wide range of options to help those engaged with online or blended learning become more effective, whether they’re new to these types of programs or experienced or somewhere in between. Our professional learning program includes hands-on training, support materials, and on-demand courses. We have a professional team dedicated to helping you identify the right model for your students, and we’ll support you through every step of implementation. If you choose to use your own instructors with our curriculum, many of our training options are included as part of your partnership with FuelEd, while others are offered at a nominal cost.

The FuelEd Professional Learning Team

Our professional learning team helps educators get the most out of their online or blended program.

Our training sessions are developed and facilitated by former teachers, administrators, and learning and development professionals who bring a wealth of knowledge and experience to what they are teaching. These experts focus on teaching the best practices for online or blended instruction while helping you fully learn how to use our products and systems.

Fuel Education’s professional learning program is:

- Designed for instructors, administrators, and mentors
- Geared toward all levels of practitioners, from beginner to advanced
- Available through online courses, live online sessions, or onsite sessions

You can select from a variety of virtual and in-person training options:

- Self-paced online courses that participants can access through a learning management system (LMS) and complete on their own schedule.
- Live online webinars, typically one to three hours long, led by one of FuelEd’s expert trainers through a collaborative, virtual classroom.
- Onsite training led by one of FuelEd’s expert trainers at your school or district office—typically one-day sessions, but expandable to meet your unique needs.

Professional Learning Pathways for Instructors

We have successfully trained more than 5,000 teachers across the country in K-12 instruction for online and blended learning environments. If you choose to use your own teachers with our curriculum, we can help them transition to the new teaching model required in online and blended learning.

In our first level of training, instructors receive access to on-demand training courses, which are available 24/7 to enable teachers to learn whenever their schedule permits. FuelEd understands the importance of providing the same flexibility in our professional training that we strive to provide for students taking our courses. Schools and districts can also review the training modules throughout the year as questions arise or staffing changes occur.

As teachers become more proficient with online and blended instruction, we offer a wide range of ongoing professional learning webinars to help them expand their knowledge and skills. We understand that real success happens when instructors know how to use our products and also when they understand the best practices for implementing them. When teachers succeed, students succeed—we believe thorough professional learning is an essential element of that shared success.

Professional Learning Pathways for Administrators

School district administrators also receive complimentary access to all of our on-demand training courses. Participants learn how to enroll students in courses, assign instructors to sections, monitor student progress, access reports, and support semester and year end transitions.

As administrators become familiar with online and blended education, we offer additional learning opportunities that focus on supporting schools as they look to evaluate program effectiveness, review best practices, and analyze data to inform instruction.

Professional Learning Pathways for Mentors

Mentors are school or district employees who oversee and motivate their students who take online courses. They also serve as a liaison between the school and the online instructor. Our training for mentors, which is included in your FuelEd partnership, is designed to help mentors understand their role and responsibilities. Mentors learn how to enroll students in courses, monitor student progress, and access reports. They also receive an overview of the curriculum and how the LMS is used within a classroom.

Getting Started

- **Please visit the training resources site for additional information about our offerings:**
