Introducing PEAK¹²

An Intelligent Management Center For Schools and Districts

peak¹²

It's a breakthrough system that is already proving itself in districts across the country.

PEAK¹²—Personalize, **E**ngage, and **A**chieve with **K**¹²

As the adoption of online learning grows, K¹² recognized that districts needed more than just great curricula and support services to be successful. They also needed a streamlined way to customize and deliver the right content to their students, utilize the most flexible solutions to fit their needs and budget, provide a single point of administration, and offer a consistent experience for all users.

To solve this, a top team at K¹² developed PEAK¹², the intelligent management center that gives you and your staff a way to personalize, integrate, and manage online learning programs. By aggregating all of your district's online curricula, content, instruction, and administration activities into a single, unified system, the PEAK¹² platform enables a highly personalized and efficient online learning experience—one that brings together all of the elements needed for students to succeed.

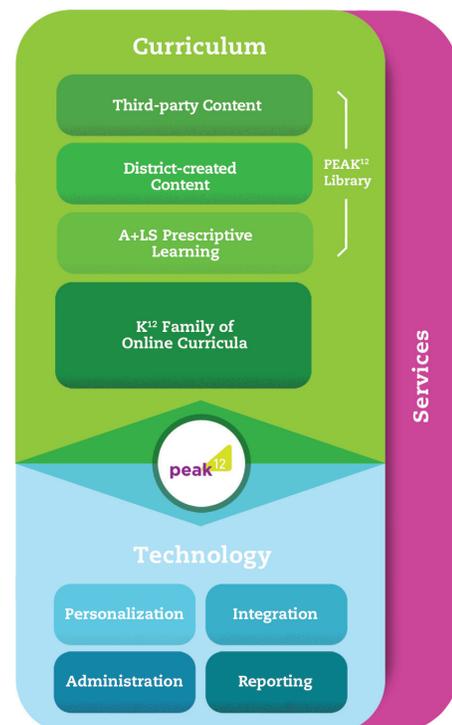

How PEAK¹² Works

The foundation of PEAK¹² starts with state-of-the-art tools, developed by a team of K¹² software specialists and online learning experts.

PEAK¹² includes a personalization engine for modifying courses, administration tools for efforts such as enrollment management, systems integration capabilities with a variety of hosting options, and reporting and alerts for real-time program management.

On top of this foundation, we add award-winning online curriculum. This currently includes more than 170 Aventa by K¹² courses for original credit and credit recovery, as well as nearly 40 world language courses from Middlebury Interactive Languages.

The next layer is the PEAK¹² Library, which offers a catalog that can be used to personalize any online course, including thousands of lessons and assessments from the A+nyWhere Learning System by K¹². In the near future, you'll be able to augment courses by using content created by your own district as well as third-party education providers.

To help you get the most out of PEAK¹², we provide expert implementation and consulting (see pgs. 16–17). And rest assured, PEAK¹² is already benefitting hundreds of school and district partners.

The Key Benefits of PEAK[12]

This integrated intelligent management center for online learning eliminates the need for multiple logins and enrollment systems, giving districts a unified view of student performance. The platform also offers these specific benefits:

District Leadership

PEAK[12] makes learning highly personalized, which can lead to higher achievement and improved student outcomes. It also enables budget savings through a reduced cost of administration.

Administrators

Administrators can spend less time in administration and more time focused on solutions for students.

Teachers

Teachers can personalize lessons with engaging content to meet students' individual learning needs.

Students

Students can take relevant, effective lessons, gain scheduling flexibility, and benefit from an expanded variety of courses and learning options.

Personalization Using the PEAK[12] Library

Using content from the PEAK[12] Library, you can customize courses to your exact requirements, whether for a single student, district wide, or any size group in between.
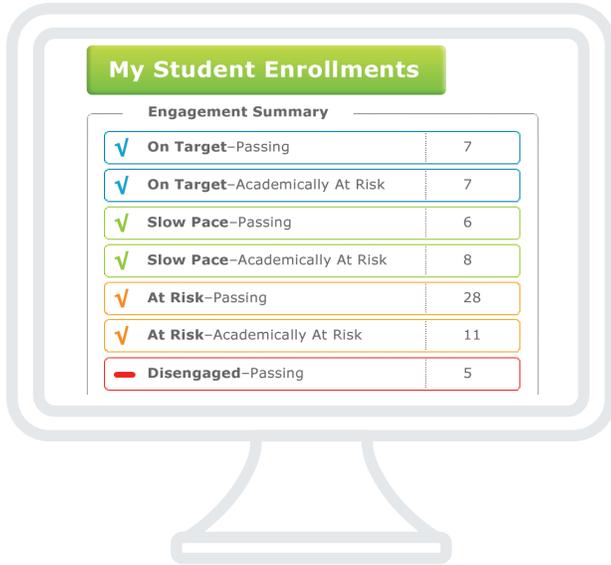

Student	Group	Class	School	District

The PEAK[12] content library is easily searchable and dynamic, allowing staff to modify existing courses or build a completely new course. For example, you can integrate any of the 5,500 lessons and assessments from the A+nyWhere Learning System by K[12], whether to remediate or enrich student learning. PEAK[12] will also make it easy to include district-created content, such as documents, videos, and more.

The power of customization means a teacher can focus on effective, differentiated instruction. PEAK[12] aggregates multiple catalogs of content in one place, organizes them for fast search, allows for dynamic course or lesson development, and publishes it for delivery to students.

Reporting and Alerts

PEAK[12] has robust reporting features, giving administrators and teachers the ability to glean intelligence about all of their students at any given time through a single, integrated interface.

My Student Enrollments

Engagement Summary

√	On Target–Passing	7
√	On Target–Academically At Risk	7
√	Slow Pace–Passing	6
√	Slow Pace–Academically At Risk	8
√	At Risk–Passing	28
√	At Risk–Academically At Risk	11
—	Disengaged–Passing	5

One of the most powerful reports in PEAK[12] is the "Student Engagement Summary." At a glance, this unique dashboard shows you how students—in a classroom, a school, or across your entire district—are performing in their online course(s). You can see which students are on target, moving at a slower pace, passing, at risk, or disengaged. You can also see who has yet to start a course, and who is new to your online program. This helps you instantly identify students who need help—whether it's to get started, resolve a technical issue, or determine a remediation strategy.

PEAK[12] also automatically issues alerts to your dashboard based on your role. For example, if you're an administrator, an alert may appear showing the number of new student enrollments that require your approval. The PEAK[12] alert system brings your administrators, teachers, mentors, and other members of your staff in sync, making sure no action or decision requiring their attention falls through the cracks.

Enrollment and Administrative Tools

Administrative responsibilities, such as managing licenses, student accounts, and enrollments, are also made more efficient with PEAK[12].

For example, student enrollment follows a simple, wizard-like process that guides you through clearly defined steps:

1 Choose the student to enroll

2 Assign the course and the section

3 Add any necessary enrollment details

Once you've completed this process, the "My Student Enrollments" screen presents a highly interactive, searchable, and sortable dashboard that helps you keep track of all course enrollments within your district. You can quickly drill down into the details you need, including the date range a course has been assigned to a student, the last time a student logged in to the course, and each student's current test scores. You even have one-click access to e-mail a student, teacher, or mentor directly.

Plus, you can export any report into Excel or save it as a PDF, in order to easily share with staff, parents, and individual students.
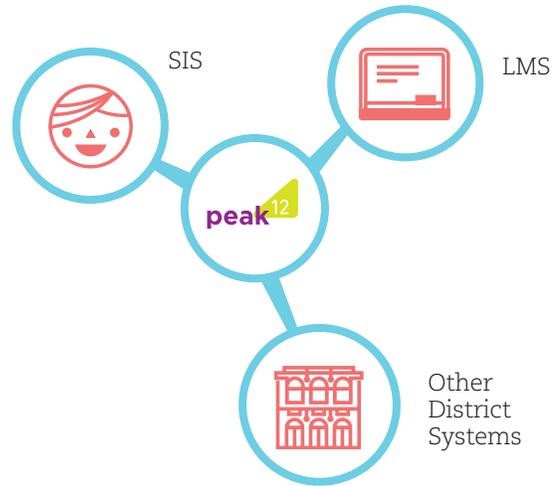

Integration

Because PEAK[12] is designed as an open platform, it will soon help bring together systems in your district that don't currently "talk" to one another.

This may include your Student Information System (SIS), Learning Management System (LMS), and other systems you may use, such as an analytics program. The open structure also gives you many flexible options for growing and evolving new learning models across your district.

No matter which systems you use now and in the future, PEAK[12] can help you access data from all of them under one umbrella, through one single login and one combined interface. The efficiencies this creates for your district are immeasurable—opening up more time for your teachers to teach and your students to learn.

Every step of the way, your administrators will have multiple tools at their fingertips in order to check student progress, pinpoint exact areas of need, and celebrate success.
